Re: Standard Chlorine Superfund Site
Delaware City, Delaware

Dear Ms. Armstrong:

As discussed during our telephone conversation of 24 February 1993, I am enclosing a map which illustrates the location of Air Products and Chemicals, Inc.'s ("Air Products") Delaware City, DE property, particularly the 6-7 acre portion on which Standard Chlorine has stockpiled soil. As you will observe from the map, Air Products' property resembles a triangle, the base of which is along Governor Lea Road. The top portion of the triangle (itself a triangle) is the area beyond Air Products' fence which is also owned by Air Products. This area is depicted on the enclosed map as the cross hatched triangular section.

Subsequent to our telephone conversation, I have been informed by our Real Estate Department that it is awaiting receipt of the drawings which resulted from our recent survey of the property. I will review these drawings once they arrive and, if they prove to be useful for your purposes, I will send them to you. Finally, we have taken another look at the photographs of the piles and frankly do not know if they will provide you the proper perspective such that they would substitute for a site visit. Nonetheless, we will have copies made for you if you wish.

If you have any questions, please do not hesitate to contact me at 481-2558 or Steve Reese at 481-7465.

Sincerely,

Todd Solodar
